

VIBRALASTIC™ TYPE VM MOUNTS

Vibralastic Type VM Mounts are designed for applications with low frequency vibrations. They are also excellent for shock attenuation because they offer large deflection capability. These mounts offer passive vibration isolation for measuring equipment, test cells and electronic instruments.

Type VM Mounts are designed to provide a large degree of deflection at low loads. Even though this mount design provides high amount deflection, it is compact, light weight, and features easy installation.

Typical applications are as follows:

- Fans
- Electric motors
- Packaging applications
- Compressors
- AC units
- Weighing scales
- Vibratory screens
- Measuring equipment
- Pumps
- Test cell equipment
- Ventilators
- Refrigeration units
- Power handling machinery
- Noise control units
- Food processing equipment
- Electronics instruments
